

"The multiple interfaces to the software allow individuals across job functions to gain value from the system. From project people working on the tendering process, supplier companies providing responses to each tender requirement, to project safety people involved in hazard management and contract management individuals reconciling systems and organisations. The simple yet intuitive system means a wide variety of people can access it without having prior knowledge of the tools or processes.

The ability to work collaboratively and in real time with our tendering suppliers has been extremely useful and beneficial and saved us many hours of time-consuming work."

Allan Toft, Rail Net Denmark

## ComplyPro in action

Rail Net Denmark is responsible for 2,323 km of railway tracks. Approximately 2,700 trains run on its rail network every day and almost a million trains every year. On a daily basis, Rail Net Denmark is responsible for 38,000 arrivals and departures at stations all over Denmark. More than 160 million passengers and 7.5 million tons freight are transported annually on its network.

 **Banedanmark** The Signalling programme constitutes several individual projects within it such as two separate ERTMS re-signalling projects, an ERTMS onboard project and a further re-signalling project for the Copenhagen suburban line. Requests for proposals have been put together which are to be sent to a number of multi-disciplinary suppliers. Delivery of the project will be highly complex and multi-faceted.

The Signalling Programme needed a system that was able to cope with the intricacies of such a major project and allow them to efficiently manage responses and award contracts to multiple suppliers with a full decision-making audit trail.

### Comply Serve

Rail Net Denmark originally contacted Comply Serve to enquire about the **ComplyPro Compliance Management** module which allowed them to build the requirements of the project as well as compliance matrices to track progressive assurance. When the Banedanmark project was announced Comply Serve advised Rail Net Denmark about the *Bid Management* module within **ComplyPro** which would perfectly complement such complex requirements from the tendering process.

The system was adapted and developed to match the Banedanmark project and is now running to gather and analyse the many responses from this complex tender.

On completion of the tender process, **ComplyPro Compliance Management** can be used on the live project to track supplier progress, compliance and progressive assurance.

### About Comply Serve

#### *We know your industry... and your project complexities*

Comply Serve combines deep knowledge of project methodologies and industry behaviours to provide software products designed to simplify, automate and ensure successes in all aspects of your project work.

Comply Serve's unique web-based solutions benefit those in highly-regulated industries as well as managers dealing with complex compliance or assurance goals.

Fast, flexible and easy to use, Comply Serve's portfolio of products provide maximum control of your project and supplier network, ensuring that any number of project requirements and obligations are completed and documented by all concerned parties.

Fully scalable to meet the requirements of small, large and growing projects, **ComplyPro** provides extensive drill-around capabilities in each stage of every module. The simple modular structure provides your company with the benefit of adapting the product to suit the specifics of your company, industry or project.

Modules include

- ComplyPro Specification Development
- ComplyPro Progressive Assurance
- ComplyPro Compliance Management
- ComplyPro Supplier Management
- ComplyPro Bid Management
- ComplyPro Issues Resolution & Assumption Management
- ComplyPro Hazard / Safety Management
